

project : LUMINAIR INSTALLATION OVERVIEW.

LUMINAIR INSTALL : UNIQUE & ETHICAL CUSTOM INSTALLATION AND COMMISSION SERVICES.

At LUMINAIR we love to see our products and ideas in their final environment. Especially when seamlessly integrated to enhance the space, aid function and reduce any environmental impact other similar products or installs would have had. To this extent we offer a full product and custom commission installation service.

From permanent lighting installations incorporating our LED lighting range together with other carefully selected products or low environmental impact, temporary displays for concerts, festivals and other events. Bars, clubs, hotels, restaurants, parks, estates and private homes & gardens, can all benefit from our eco-friendly, sustainable and energy saving solutions, enhancing the look and feel of their surroundings without breaking the bank or the planet. Working with your own ideas or letting us guide you to an ideal design, we hope to be able to bring a truly versatile service.

RESPONSIBLE INTEGRATION.

With energy prices on the rise, making the right decision at the start of your project and integrating energy saving products and renewable energy systems has never been more prudent. As well as offering energy saving and eco-friendly products LUMINAIR works closely with renewable energy system manufacturers and can combine the latest solar, wind & hydro energy systems with your installation. Along with robust craftsmanship and maintenance free products you can be sure of a long lasting, unique and money saving install.

Small residential projects as well as commercial, schools and community projects can all be catered for so that your sustainable and eco-friendly project doesn't have to stop with the building. Furniture and fittings that make use of sustainable and recycled materials can also be designed and integrated into the installation. From recycled plastic benches and counter-tops to sustainable wooden structures and display equipment. All locally sourced and manufactured within the UK.

LUMINAIR INSTALL : SUSTAINABLE PRODUCTS AND INTERIORS.

Sustainability is having a growing influence on every type of design and construction project, with the sustainable design of the places we work, shop, eat or play being an important element.

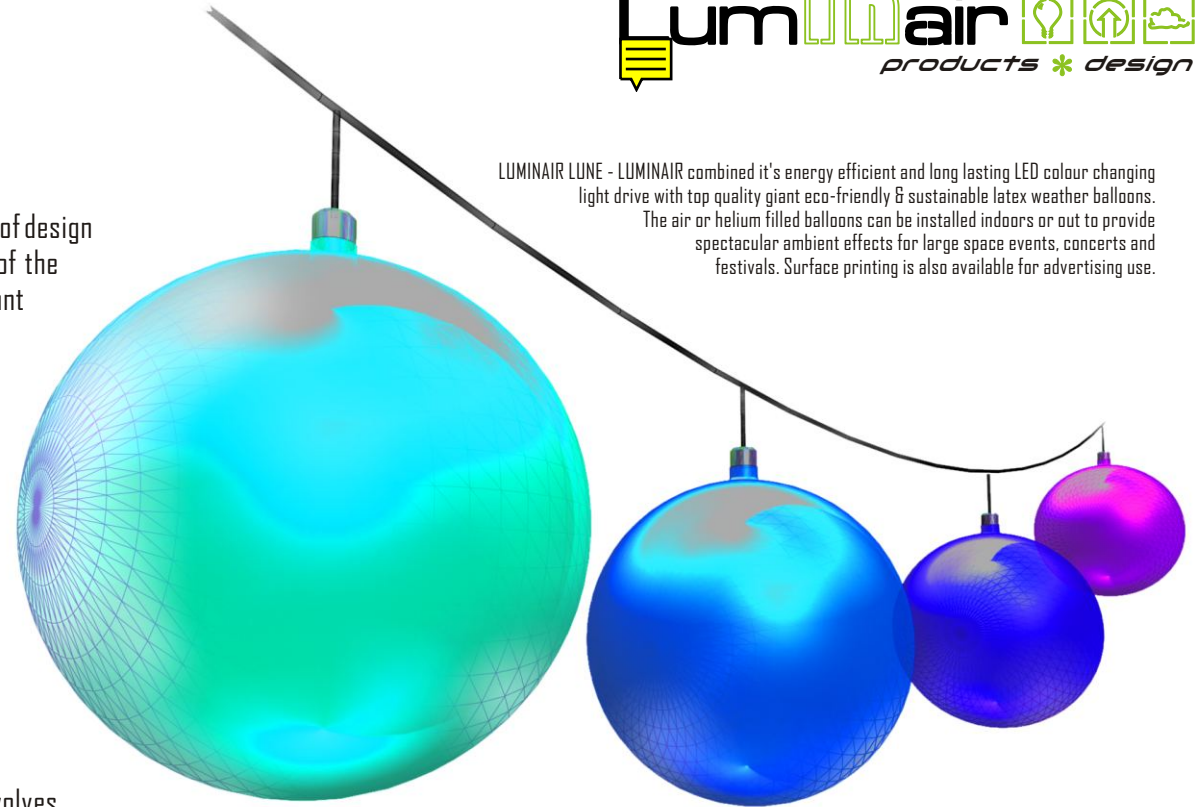

Today, the policies and values of many businesses include a strong emphasis on environmental responsibility as well as its employee and customers well-being. Incorporating sustainability into the workplace helps a company express these values and also helps employees and customers feel good about where they work and visit, creating enthusiasm and pride in their contribution.

MATERIAL & PRODUCT EVALUATION.

Some people mistakenly assume that green design involves products that are untested, expensive or unreliable. Others worry that aesthetics are compromised when sustainability is a priority, in reality, neither has to be true. Still, dealing with contractors who aren't comfortable with sustainable materials, techniques and technologies can be a disadvantage because many contractors are reluctant to be among the first to install some of the newer sustainable products. **LUMINAIR** can either work with or organise the required contractors and ensure that any issues or concerns are resolved and all products and designs are integrated to the best possible standard.

Common ways to improve sustainability are to incorporate locally sourced products and services, use wood that has been certified under the FSC guidelines, indicating it was grown, harvested and processed sustainably, and use recycled materials. However not everything that claims to be sustainable really is. **LUMINAIR** evaluates products and materials on a life-cycle basis by asking and researching what are the raw materials and where do they come from? How and where is the product manufactured? How does it get here from there? How is it installed? How toxic are the components, installation and maintenance procedures? And finally, what happens to it at the end of its life? Is it destined for landfill? Or can it be reused or recycled? We always ensure the materials and products we use in your project gives the most eco-friendly and sustainable answer to these questions giving you total peace of mind.

LUMINAIR LUNE - LUMINAIR combined its energy efficient and long lasting LED colour changing light drive with top quality giant eco-friendly & sustainable latex weather balloons. The air or helium filled balloons can be installed indoors or out to provide spectacular ambient effects for large space events, concerts and festivals. Surface printing is also available for advertising use.
